The journal will publish papers in pure and applied mathematics in general but, in partic
papers on functional equations, combinatorial and numerical analysis. The languages in w
papers will generally be accepted are the international congress languages: English, Frenc
German.

Types of manuscripts that will be considered for publication include original research pa
problems and their solutions, expository papers and, as short communications, self-contai
abstracts of papers which have been accepted for publication either by this or some other
with a referee system.

Manuscripts of papers should be submitted to the Editorial Office or to a member of the
board. Authors of papers should send the original and two additional copies. Since it is th
policy of the journal to publish in advance short communications of all results it accepts f
publication, authors should include with the original submissions a self-contained abstrac
their paper of length 25–100 lines, which contains a precise statement of the results in the
